

**In the Specification**

Please replace the paragraph on page 9 at line 15 with the following marked up paragraph:

---

B1  
**Figure 6** illustrates in one embodiment, a parent descriptor info block 700 for a root list placed in the root list descriptor extended information. The parent descriptor info block is placed at 810 of list descriptor 800 shown in **Figure 7**. The parent descriptor info block 700 includes root\_list\_identifier 750 used by the controller for accessing the parent entry. Fields such as compound\_length 710, info\_block\_type 720, ~~and~~ primary\_fields\_length 730 and descriptor\_specifier\_type 740, are general info block fields of the parent descriptor info block 700. One embodiment embeds information about the parent list within the list descriptor.
